PRODUCT MANAGER

Product manager with 8+ years in product and 10+ years leading complex, cross-functional programs in government and technology. Takes ambiguous, multi-stakeholder problems from discovery to shipped product, aligns partners without formal authority, and builds delivery practices that outlast the engagement. Experience spans civic tech and government digital services, homelessness and human services, and product trust and safety at Instagram.

KEY SKILLS

Product Strategy & Roadmapping · Product Discovery & User Research · Prioritization & MVP Definition · Human-Centered Design & Service Redesign · Agile Delivery · Stakeholder Alignment & Influence · Policy & Regulatory Translation · Product Safety, Privacy & Compliance · Legacy System Modernization · Change Management · Coaching & Capacity Building

WORK EXPERIENCE

59 Projects · Product Manager — Jul 2026 – Present · Remote

- Partner with the founder and product designer on Many Paths, a shared by-name list and care coordination platform for providers serving people experiencing street homelessness in Santa Fe, refining the prototype, surfacing gaps, co-leading user interviews, and turning feedback into a prioritized backlog.
- Identified the need for data security and privacy compliance (including HIPAA) for sensitive personal and health data, brought in expert advisors, and set the pilot launch to follow those requirements.
- Own the plan to a viable pilot launch, including the pilot definition, success metrics, and clear priorities, sequencing, and asks for each stakeholder.
- Helped shape the firm's new discovery offering for local and state government, and edited its proposal to the City of Santa Fe for a five-year homelessness strategy.

LakeRaven, LLC · Product Manager — Dec 2025 – Jun 2026 · Remote

Client: New Mexico Bureau of Geology & Mineral Resources, statewide Water Data Initiative

- Shipped V1 of the Bureau's first unified data management platform on the committed date (April 2026) as its first product manager, owning product strategy, V1 scope, and the roadmap.
- Defined V1 through discovery: ran user research with field staff and researchers, facilitated a two-day roadmapping workshop with 15+ leaders, engineers, and field staff, and turned cross-bureau input into a V1 product definition and prioritization framework.
- Sequenced foundations first, prioritizing data governance and access controls ahead of higher-risk capabilities like data entry to avoid costly rework.
- Held the launch date through a mid-project capacity shock (two developers on leave in the same week) by re-scoping the data migration to the highest-value, lowest-effort data and making the tradeoff explicit to users and leadership.
- Restored leadership confidence with a predictable delivery and communication cadence, which led to new funding for a statewide geothermal initiative, a continuous sensor data pipeline, and cross-Bureau partnerships.
- Wrote the statement of work for funded follow-on work and managed staffing and capacity through four personnel transitions as the delivery escalation point.
- Stood up agile delivery from zero (sprint planning, retrospectives, PR review, bug triage, a team working agreement) plus an AI context repository; the practices held after handoff to a staff product owner.

Rebel Alliance · Product Manager — Jul 2025 – Jan 2026 · Remote

Global pro-bono civic tech nonprofit (Montenegro-based) that partners with governments to deliver digital services

- Led a distributed volunteer team across time zones from requirements to an approved website concept, facilitating stakeholder decisions and a clean handoff to design and development.

18F | General Services Administration · Product Manager — Sep 2024 – Mar 2025 · Remote

- Led discovery for the DoD Federal Voting Assistance Program, where state fax requirements left a five-person team hand-processing thousands of emailed ballots on deadline.
- Mapped the end-to-end voter journey, state-by-state rules, and technical constraints with a service designer and an engineer.
- Owned the recommendations and a Now / Next / Later roadmap, aligning a DoD program, state election officials, and partner agencies outside the team's reporting line.

Meta Platforms · Product Integrity Program Manager — Mar 2021 – May 2023 · Remote

Instagram Product Trust & Safety: owned safety strategy for a portfolio of products and policy areas, with no direct engineering or data science resources

- Owned safety strategy for five high-complexity Instagram product areas against a role expectation of one, defining how products were designed, reviewed, and launched to prevent harmful and policy-violating behavior.
- Co-led a platform-wide safety audit of 50+ live Instagram products, including orphaned products with no owning team, and persuaded teams with separate roadmaps to implement required mitigations, including user reporting, automated detection and enforcement, measurement and guardrails, and content and teen safety controls.
- Drove adoption of safety mitigations across dozens of product teams and hundreds of features, integrating standard detection, reporting, and measurement tooling into launches while protecting product KPIs and business OKRs.
- Secured leadership buy-in for a new product safety review model, built with a cross-functional working group (operations, legal, product, engineering, data, policy); the model was adopted across Meta's Family of Apps.
- Shipped the first in-product safety controls for licensed music across Instagram and Facebook (in-player reporting, controls to hide unwanted music, and filtering of violating content from search and recommendations), after building the business case that secured resourcing and co-writing the first content policy for music violations.

Meta Platforms · Product Program Manager — Aug 2018 – Mar 2021 · Menlo Park, CA

Instagram Digital Rights

- Built Instagram's first cross-functional pre-launch review program for digital rights abuse, standardizing how teams assessed legal, privacy, operational, and compliance risk.
- Mentored and trained a team of 7 to own Instagram-wide product safety reviews.

Groupon · Technical Program Manager — Oct 2016 – Aug 2018 · Palo Alto, CA

Relevance organization: search and recommendations

- Owned GDPR compliance for the Relevance engineering organization, translating legal requirements into per-team technical requirements and feasibility timelines.
- Designed the Privacy by Design risk assessment process, reconciling legal, product, and engineering priorities; delivered by the GDPR deadline.
- Coached 6 engineering and 5 product teams through agile adoption, and introduced roadmaps, goals, and an engagement model for a bottleneck organization other teams depended on.

Delivering Happiness · Operations & Systems Program Manager — Jun 2014 – Jul 2016 · Remote

- Cut the sales cycle 57% (64 to 27 days) by redesigning Salesforce workflows and implementing a lead management system, in partnership with the COO.

EDUCATION

George Mason University, Bachelor of Arts, Psychology (2014)
