PRODUCT MANAGER

Product manager with 8+ years in product and 10+ years leading complex, cross-functional programs in government and technology. Takes ambiguous, multi-stakeholder problems from discovery to shipped product, aligns partners without formal authority, and builds delivery practices that outlast the engagement. Experience spans civic tech and government digital services, homelessness and human services, and product trust and safety at Instagram.

KEY SKILLS

Product Strategy & Roadmapping · Product Discovery & User Research · Prioritization & MVP Definition · Human-Centered Design & Service Redesign · Agile Delivery · Stakeholder Alignment & Influence · Policy & Regulatory Translation · Product Safety, Privacy & Compliance · Legacy System Modernization · Change Management · Coaching & Capacity Building

WORK EXPERIENCE

59 Projects · Product Manager — Jul 2026 – Present · Remote

Independent firm building civic technology with local and state government in New Mexico

- Partner with the founder and product designer on Many Paths, a shared by-name list and care coordination platform for providers serving people experiencing street homelessness in Santa Fe, refining the prototype, surfacing gaps, co-leading user interviews, and turning feedback into a prioritized backlog.
- Identified the need for data security and privacy compliance (including HIPAA) for sensitive personal and health data, brought in expert advisors, and set the pilot launch to follow those requirements.
- Own the plan to a viable pilot launch, including the pilot definition, success metrics, and clear priorities, sequencing, and asks for each stakeholder.
- Helped shape the firm's new discovery offering for local and state government, and edited its proposal to the City of Santa Fe for a five-year homelessness strategy.

LakeRaven, LLC · Product Manager — Dec 2025 – Jun 2026 · Remote

Client: New Mexico Bureau of Geology & Mineral Resources, statewide Water Data Initiative

- Shipped V1 of the Bureau's first unified data management platform on the committed date (April 2026) as its first product manager, owning product strategy, V1 scope, and the roadmap, and sequencing data governance and access controls ahead of higher-risk capabilities.
- Led discovery: ran user research with field staff and researchers, facilitated a two-day roadmapping workshop with 15+ leaders, engineers, and field staff, and used AI-assisted synthesis to turn cross-bureau input into a V1 product definition and prioritization framework.
- Held the launch date through a mid-project capacity shock (two developers on leave in the same week) by re-scoping the data migration to the highest-value, lowest-effort data and making the tradeoff explicit to users and leadership.
- Restored leadership confidence with a predictable delivery and communication cadence, which led to new funding for a statewide geothermal initiative, a continuous sensor data pipeline, and cross-Bureau partnerships.
- Co-wrote the statement of work for funded follow-on work, and advised on staffing and capacity through four personnel transitions as the delivery escalation point.
- Introduced agile delivery and modern product practices (sprint planning, retrospectives, PR review, bug triage, a team working agreement) and built an AI context repository; the practices held through the handoff to, and onboarding of, a newly hired staff product manager.

Rebel Alliance · Product Manager — Jul 2025 – Jan 2026 · Remote

Global pro-bono civic tech nonprofit (Montenegro-based) that partners with governments on digital services

- Led a distributed volunteer team across time zones from requirements to an approved website design, facilitating stakeholder decisions and the handoff to development.

18F | General Services Administration · Product Manager — Sep 2024 – Mar 2025 · Remote

Federal digital services consultancy within GSA

- Led discovery to modernize the DoD Federal Voting Assistance Program's ballot services, where state fax requirements left a five-person team hand-processing thousands of emailed ballots on deadline.
- Mapped the end-to-end voter journey, state-by-state rules, and technical constraints with a service designer and an engineer, and assessed off-the-shelf technology options with the team's acquisition specialist and agency staff.
- Delivered recommendations and a Now / Next / Later roadmap in under three weeks after the engagement was cut short by two months, aligning DoD, state election officials, and partner agencies.

Meta Platforms · Product Integrity Program Manager — Mar 2021 – May 2023 · Remote

Instagram Product Trust & Safety

- Owned safety strategy for five high-complexity Instagram product areas against a role expectation of one, with no direct engineering or data science resources, shaping how products were designed and launched to prevent user harm by mitigating policy-violating behavior.
- Co-led a platform-wide safety audit of 50+ live Instagram products, including orphaned products with no owning team, and persuaded teams with separate roadmaps to implement necessary safety systems and mitigations, including user reporting, automated detection and enforcement, measurement and guardrails, and content and teen safety controls.
- Secured leadership buy-in for a new product safety review approach, built with a cross-functional working group; the model was later adapted for scale and adopted across Meta's Family of Apps.
- Built the business case for, and shipped, the first in-product safety controls for licensed music across Instagram and Facebook: in-player reporting, controls to hide music, and filtering from search and recommendations.
- Helped design the first automated detection model for violating music: co-wrote the content policy and reviewer guidance, secured review capacity to label and test, and secured engineering to launch and tune it on review decisions, blocklists, and user signals.

Meta Platforms · Product Program Manager — Aug 2018 – Mar 2021 · Menlo Park, CA

Instagram Digital Rights

- Established Instagram's first program for assessing digital rights risk before launch (IP, counterfeits, privacy, music rights, and legal compliance), standardizing how those risks were assessed and addressed across the platform.
- Built a risk heat map from product usage, reporting, and enforcement data to prioritize launch reviews, then mapped product features to the harms they enable with partner risk teams, producing guidance teams used to plan mitigations early.
- Mentored and trained a team of 7 to own Instagram-wide product safety reviews.

Groupon · Technical Program Manager — Oct 2016 – Aug 2018 · Palo Alto, CA

Relevance organization: search and recommendations

- Brought in to unblock the product org's biggest bottleneck: embedded with the Relevance teams, ran discovery across the org, and partnered with a newly hired engineering director to roll out a new charter and ways of working, from PR reviews to bug prioritization.
- Coached 6 engineering and 5 product teams through agile adoption, set a consistent release cadence, and built sprint and release dashboards so dependent teams could plan around Relevance.
- Launched a collaborative planning process with the org's PMs that made prioritization and tradeoffs transparent to dependent teams and gave Relevance control of its own roadmap, reducing reactive work.
- Owned GDPR compliance for the org: designed the Privacy by Design risk assessment process and translated legal requirements into per-team technical requirements, delivering by the deadline.

Delivering Happiness · Operations & Systems Program Manager — Jun 2014 – Jul 2016 · Remote

- Cut the sales cycle 57% (64 to 27 days) by cleaning sales data, redesigning Salesforce, and owning rollout of a marketing automation platform that sharpened targeting and lead quality.

EDUCATION

George Mason University, Bachelor of Arts, Psychology (2014)
